Piloting **end of cycle 1 of FFVL passeport**

Sandie Cochepain, world champion 1997 - 2000, and test pilot for the French Federation for 10 years on the standard ACPULS, and Baptiste Rousset, pilot of acrobatic competition in the international top 15 and vice-champion of France, will accompany you in your learning.

Program Piloting Courses

The research of the control

Green level of your free-flying passport.

The objective of this training course is to harmonize your contact with the glider. We shall try to improve your piloting by decomposing the body languages of piloting and by adapting them to various exercises.

We shall bring you to approach the limits of the domain of flight of your glider and to demystify then obtain a perfect control from the techniques of fast descent.

Logistics : an instructor will organise your takeoffs and bus shuttles.

A rescue boat will be on standby during your training above the water.

The SIV qualified instructor watches and refines your exercises. He assures a follow-up by filming.

Video debriefing at the end of every session.

Required level

These training courses are intended for autonomous pilots from the initial level certificate. When you commit yourself to a piloting flight, alone or as part of a training course, you must be conscious that this type of flight implies the notion of responsibility and accepted risk. The role of the instructors is to assure the global security of the group, through the choices of adapted exercises and by giving advice.

In flight, the participants evolve in a autonomous way, without systematic assistance of the instructors. You will stay within the limits of your experience.
